

How To Measure

When ordering Mystic Motorized Screens, please use Total Width and Total Height measurements you want your finished unit to measure. For example, on a under header mount application (recessed mount, between the jamb) use your opening's dimensions. For a surface mount (often referred to as face or flush mount) application, add 4.5" to the opening width dimensions and (a) add 5.5" to the opening height dimensions for the hood and (b) add another 3" to the opening height for the bottom weight bar to be completely out of the opening.
